PROFESSIONAL SUMMARY

Computer Science graduate with a 1.14 GWA and full-stack engineering experience building systems for intelligence, reporting automation, workflows, and stakeholder-facing operations. Strongest work centers on converting manual and fragmented processes into structured systems with reliable data models, clear user flows, deployment notes, and maintainable handoff documentation. Recognized through DOST-SEI, Real LIFE Foundation, and LANI scholarships, with leadership experience mentoring student developers and supporting cloud/software communities

EDUCATION

Polytechnic University of the Philippines - Manila, NCR

Bachelor of Science in Computer Science | 2022-2025 | GWA 1.14 | President's Lister | Magna Cum Laude

Higher School of the University of Makati - Makati City, NCR

STEM Strand | 2020-2022 | GWA 96.93% | High Honors | Capstone Champion

TECHNICAL SKILLS

Languages: PHP, Python, TypeScript, JavaScript, SQL, Java, C, Bash

Backend and APIs: Laravel, FastAPI, Node/Fastify, REST APIs, authentication/RBAC, reporting workflows

Frontend: React, Next.js, Vue, Blade, Tailwind CSS, Bootstrap, Vite, responsive UI

AI and Data: OCR/PDF extraction, LayoutLMv3, PyTorch, Hugging Face, graph-based modeling, T5 summarization, Pandas, NumPy, evaluation metrics

Databases and Infrastructure: MySQL, PostgreSQL, SQLite, Prisma/Eloquent, schema design, Git/GitHub, Docker, Kubernetes, Linux, CI/CD, AWS S3/CloudFront/Lambda

PROFESSIONAL EXPERIENCE

Full-Stack Developer | Freelance / Independent Projects | 2022–Present

- Delivered web systems across Laravel, React, Node/Fastify, Vue, Python/FastAPI, PHP, and SQL, including authentication, REST APIs, responsive interfaces, and handover documentation.
- Converted stakeholder requirements into data models, back-end workflows, front-end screens, deployment notes, and maintainable project structures.

Intern and Scholar | Department of Science and Technology – Science Education Institute | 2025

- Contributed to a Laravel-based government information system by implementing SQL-driven reports, PDF generation, aggregation logic, and standardized reporting templates.
- Supported CI/CD, Git workflows, Linux setup, runbooks, and release troubleshooting to improve deployment traceability and team handoffs.

Programming Lead | Cisco NetConnect | 2024–2025

- Led student developers in Python, JavaScript, Bash/batch scripting, Git collaboration, code review, automation exercises, and maintainable software-development habits.
- Designed practical coding exercises and mentored peers on algorithmic thinking, maintainability, and disciplined version-control workflows.

Founding Core Member and Cloud Practitioner | AWS Cloud Club PUP | 2022–2025

- Helped launch AWS Cloud Club PUP and supported technical workshops, peer mentoring, cloud-first event tooling, and GitHub/AWS-centered collaboration.
- Promoted cloud literacy and developer collaboration across the PUP network through bootcamps, mentoring sessions, and student-led engineering initiatives.

Technical Care Expert | Sutherland Global Philippines BGC | 2022–2023

- Resolved network, software, and hardware issues in a high-volume technical support environment; recognized as Most Excellent Trainee for analytical problem-solving and customer handling.

Legal Assistant | Melba Cawit Law Firm | 2022–Present

- Supported documentation, scheduling, client coordination, and confidential business correspondence in a professional legal setting.

FLAGSHIP ENGINEERING WORK

IntelliForm – Intelligent PDF Form Understanding System | Python, FastAPI, PyTorch, Hugging Face, LayoutLMv3, GNN, T5, PDF.js

- Architected an AI-assisted PDF form understanding system that converts complex forms into structured field classifications, layout-aware relationships, and human-readable prompts.
- Built evaluation and dataset workflows for OCR alignment, field extraction, BIO tagging, canonical IDs, and repeatable model experimentation.

Balik Scientist Program Management System – DOST | Laravel, PHP, SQL, PDF Reporting

- Automated executive reporting for a Laravel-based government information system using raw SQL joins, aggregation logic, and standardized PDF outputs.
- Supported awardee lists, engagement summaries, database-driven rollups, Git-based handoffs, deployment notes, and Linux environment troubleshooting.

ENC BGC One Shared Services Portal | Laravel, Blade, Vite, PHP, SQL

- Centralized room reservations, shuttle requests, facility policies, onboarding, approvals, audit trails, and shared-hosting deployment workflows into a Laravel/Vite internal operations portal.
- Structured request tracking, administrative review patterns, and service flows for shared organizational operations.

San Miguel Kiosk-Queue Management System | Vue, PHP, MySQL, Docker-ready local setup

- Developed a kiosk-assisted queue and appointment platform for barangay services with resident/admin portals, scheduling, seeded accounts, migrations, and API scaffolding.
- Focused on practical reliability, workflow clarity, and accessible public-service transactions.

Dataset Construction Pipeline for Philippine Government Forms | Python, OCR Alignment, JSON Datasets, BIO Tagging

- Engineered a reproducible data-processing pipeline that converts annotated PDF forms into structured JSON datasets for LayoutLMv3 training and evaluation.
- Automated bounding-box extraction, BIO tagging, canonical ID generation, and dataset traceability for repeatable experimentation.

AWARDS, SCHOLARSHIPS AND TRAINING

Scholarships: DOST-SEI Undergraduate Scholarship; Real LIFE Foundation Scholarship; LANI Local Government Scholarship

Recognition: President's Lister; Overall Best Capstone Project; Capstone Champion; Most Excellent Trainee, Sutherland; AWS Cloud Club Founding Member; Cisco Programming Lead

Training: Advanced Programming; Database Management; Front-End Development; Data Science and ML Foundations; Nexus Cybersecurity; AWS Cloud Services; Cisco Networking and Programming

ADDITIONAL ENGINEERING PORTFOLIO

Prismatic/Compiler Design: C-based programming-language project with lexical, syntax, and semantic analysis modules.

Real LIFE Scholarship Application Portal: Laravel portal supporting applicant registration, submission, administrative review, and scholarship-management workflows.

AWS Cloud Club Digital Infrastructure: Next.js/AWS student-organization tools for the club website, event utilities, internal resources, and repeatable deployments.

Digital Boot Photo Shop System: TypeScript/React/Vite/Fastify event photobooth platform with QR retrieval, token-protected admin flows, and cloud sync APIs.

4PH Housing Loan Management System: Loan-management system emphasizing secure user and loan records, schema design, and reliable retrieval.

Ricochet Rival: 2D game project with Monte Carlo-driven AI opponent strategies, adjustable difficulty, and player-versus-AI gameplay.

Real LIFE PILLAR: Centralized care system for processing scholar requirements and issues

CORE STRENGTHS

Operational Systems Thinking: Turns manual, fragmented, or document-heavy workflows into structured data models, APIs, interfaces, and repeatable handoff notes.

Delivery Discipline: Builds with authentication, reporting, documentation, deployment notes, local setup instructions, and maintainable project structure.

Reliability Habits: Uses migrations, seeders, role-aware workflows, Git-based handoffs, traceable outputs, and practical troubleshooting routines.

Communication: Documents systems clearly and coordinates with academic, nonprofit, government, client, technical support, and legal-administrative stakeholders.
